Technology built-in by IBOS

Our company has rich experiences with production of technologies used for monitoring and service works in pipes and sewerage. Provide us your idea, which functions should the built in fulfil and we design functional and reliable solution, which will help you to do the job efficiently. The built-in is carried out into the box type of cars / vans.

We are able to deliver the tailor-made equipment according to your request thanks to experienced staff and quality facility. The whole process of the production is proceed in our company - from designing up to construction of the equipment. Tailor-made delivery from one supplier saves your time and costs by ordering and subsequently during service. Convince yourself, that IBOS a.s. has every time the most advantageous solution for you.

General characteristic of built-in IBOS:

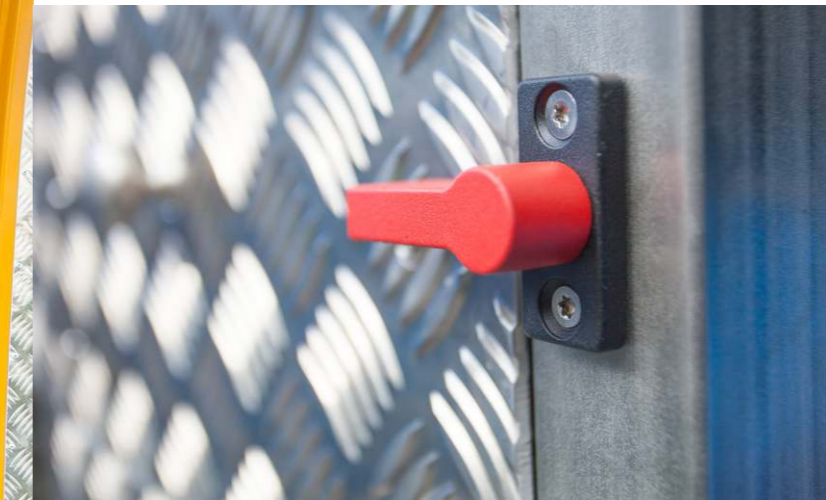

Standard solution - interior of the vehicle is professionally insulated, floor and partly the walls are coated with waterproof polyurethane coating, walls and ceiling are covered with material according to customer's wish (usually with chequer ALU plate). The inner room can be divided by dividing wall on operator's side and office side (= simpler maintenance). We are able to install independent heating, generator, electricity 12/24/220 V, battery systems for power supply, LED lights, reversing camera and other equipment according to your choice and requirements.

Camera systems:

The most modern camera systems of the producer IBOS a.s. represents efficient tool for ascertaining the condition of the pipe and preventing the emergency situations. On the basis of the monitoring result it is possible to effectively plan the investments into the sewer renovation.

You can choose from variety of camera series. From push-rod camera REVI 260, which is designed for house connections monitoring, up to top-ranking system CamBoss IV, which can be operated as firmly built-in or as mobile system.

Combination of the above mentioned technology:

We are able to combine the technology and built-it into the one car on the basis of your wish. You can have complete solution in one car - the camera system, robot and cleaning unit. More information can be advised by our sales representatives.

ProKASRO robots and UV systems:

We represent the products of Germany producer ProKASRO on Czech market, which offers wide range of products for pipe rehabilitation, from cutting robots (DN 100 - 1000) up to UV systems for curing the liners (DN 150 - 1600). The whole product range is developed and produced exclusively in Germany. The products are constantly tested and developed in order to require the high-quality product.
