CAMBOSS 150_IV.

The Boss 150 twin-engine crawler offers high performance and easy operation, it also allows the use of a satellite for monitoring connections. The system can be used with a wide range of accessories (Quick-Lock adapter, Trimaran for large DN, etc.) The reel is supplied with a cable length of 200 - 500 m. You can choose a manual version or a fully automatic unit equipped with handling wheels and a pull-out handle for the mobile system. In the case of a built-in camera, the winch can be equipped with a camera crawler trigger arm. The control box (or built-in console) is controlled via PC, equipped with the necessary programs including the DigiCAN sewer software. Alternatively, a control box without a PC can be selected, suitable for monitoring without the need to generate inspection reports. Of course, it is possible to easily and quickly replace the necessary components (polyurethane wheels, "tractor" wheels, manual arm, manual winch).
